

Our environmental policy

Pelican Press is committed to the ideals and practices of environmental responsibility through the following measures:

- Comply and where possible exceed all applicable legal and other requirements.
- Implement good environmental practice and raise awareness of environmental policies and issues amongst our employees.
- Prevent pollution by reducing wastes and emissions through the use of the best available techniques.
- Implement practices consistent with environmental protection.
- Minimise the negative impact of the printing process on the environment, through a process of continual improvement in environmental performance.
- Adopt the principles of sustainable development in conducting its administrative, commercial and social activities.
- Design products taking into account environmental aspects.
- Reduce Pelican Press's CO₂ emissions by using energy efficient plant, thereby reducing the organisation's contribution to climate change.
- Communicate this policy to all interested parties i.e. stakeholders, shareholders, customers, suppliers, employees and contractors.
- Participate in local initiatives to improve the quality of the environment.
- Implement this policy through a comprehensive plan with measurable goals and with monitoring and analysis of performance against the plan.

Procurement

- Where possible source paper from sustainable resources.
- When purchasing other raw materials take environmental issues into account.
- Informing sub contractors of their environmental obligations.

Recycling

We have a target to reduce our landfill waste. This will be achieved by doing the following:-

- All waste paper is recycled.
- All cardboard and polythene is baled & recycled.
- All aluminium plates are recycled.
- All hazardous substances are separated from landfill waste and disposed of appropriately.
- All aerosol cans are separated from landfill and disposed of appropriately.

Carbon emissions

We have a target to reduce energy costs. This will be achieved by doing the following:-

- Make all staff aware of the impact on the environment of reducing energy bills.
- Centralise our compressed air supply.
- Use low wattage bulbs in areas where colour correct lighting is not required.
- Use timers on boilers and immersion heaters.
- Installation of "power perfect" voltage reduction unit.
- Zoning of lights and more use of sensor timers.

Water use reduction

- Use cistern dams in all lavatories.
- All taps to have automatic switch off.

Hazardous Waste Registration No. NGL886
